Re: U.S. Patent No. 6,803,027, issued 10/12/2004  
Inventor(s): Virkar et al.  
**MOLECULAR DECOMPOSITION PROCESS FOR THE SYNTHESIS OF  
NANOSIZE CERAMIC AND METALLIC POWDERS**  
Attorney Docket No. 23347.PCT.US

Dear Sir/Madam:

Pursuant to 37 C.F.R. 1.322 the Patent Owner requests the issuance of a Certificate of Correction to correct an error in the priority data. Transmitted herewith is a Certificate of Correction containing the proposed correction and a copy of the cover page of the corresponding PCT publication no. WO 00/24676 showing correct priority date.

Since the error was introduced by the Patent Office, the Applicant respectfully requests that the fee under 37 C.F.R. 1.323 not be applied in this case.

Dated this 3rd day of December, 2004.

Respectfully submitted,

M. Wayne Western  
Attorney for Applicant  
Registration No. 22,788

(54) Title: A MOLECULAR DECOMPOSITION PROCESS FOR THE SYNTHESIS OF NANOSIZE CERAMIC AND METALLIC POWDERS			
(57) Abstract  A process is disclosed for forming a nanosize ceramic powder. A precursor ceramic material is formed of a fugitive constituent and a non-soluble constituent in a single phase. The precursor is contacted with a selective solvent (water, acid, etc.) to form a solution of the fugitive constituent in the solvent and a residue of the non-soluble constituent. The precursor is sufficiently reactive with the solvent to form the solution of the fugitive constituent in the solvent and form the nondissolved residue of the non-soluble constituent. The precursor material and the non-soluble residue are sufficiently insoluble in the solvent such that there is insufficient precursor material and non-soluble residue in solution to deposit and precipitate upon the residue of the non-soluble-constituent. The fugitive constituent is sufficiently soluble in the solvent such that the precursor reacts with the solvent to form the solution of the fugitive constituent without precipitation and deposition of fugitive constituent upon the residue of the non-soluble constituent in the form of nanosize particles. After the fugitive constituent is dissolved the selective solvent containing the fugitive constituent is removed from the residue. The residue remains in the form of a nanosize powder of the non-soluble constituent.
